920-TDN-002: NSIDC HW/SW Map
920-TDP-002: PVC HW/SW Map
920-TDV-002: VATC HW/SW Map
920-TDE-001: LPDAAC Hardware Diagram
920-TDL-001: LARC Harware Diagram

Baseline / Document Updates Only:

1. Add postscript utility a2ps, version 4.12, to the baseline of all PDS SGI hosts (xxdig06). NCR 37867 will be resolved by publication of this baseline element. This utility was a module delivered but not baselined in the PDS turnover.

2. Add the java compiler, javacc, version 3.0 to the COTS Version map, as a development tool. Freeware product is used only in development and is not delivered to the DAACs and is therefore not mapped to any DAAC, PVC or VATC hosts. Product has been requested to be baselined by development so that development versions can be referenced as assignments and personnel change.

3. Remove Interdrive 5.0 from the COTS version map. This version was replaced by delivery of Interdrive 7.1. Version 5.0 is not currently mapped to any PC (see 910-TDA-030 Where Used Report attached).

4. Change the baseline path of JAF 1.0.1 for Sun from /usr/ecs/OPS/COTS/jaf to /usr/ecs/OPS/COTS/jaf/jaf-1.0.1. This COTS does not conform to directory naming guidelines. With the next delivery, the directory naming guidelines will be used.

5. Change the baseline path of JavaMail 1.2 for Sun from /usr/ecs/OPS/COTS/javamail to /usr/ecs/OPS/COTS/javamail/javamail-1.2. This COTS does not conform to directory naming guidelines. With the next delivery, the directory naming guidelines will be used.

6. Remove g0icg02, l0icg02, g0drg06 from the Site-Host Map and the HW/SW maps. These hosts have been previously removed from the Hardware Diagram documents,, but were not removed from the Site-Host Map and the HW/SW maps.

7. The hosts e0wkg01 and l0aqg01 should also be removed from the Site-Host Map, HW/SW maps and the Hardware Diagrams. Hardware Engineering has confirmed this - they were removed with the SGI Replacement effort.
